

Storm Mountain PID #55 Snowplow Priority Map

BLUE: 2.5-mile access road (Storm Mountain Dr from bridge off CR43 to the T intersection with Palisade Mountain Dr). It should be plowed and sanded as needed or as soon as possible after a snow event. This road has priority over all other roads.

GREEN: Main roads (arteries). These roads should be plowed during or directly after a snow event once it reaches 6 inches. Plowing of green roads are priority over red roads and should be plowed to full width prior to commencing work on red roads.

RED: Secondary roads. These roads should be plowed only when snow depth exceeds 6 inches.

YELLOW: No snow removal on these roads (not maintained by the PID).

Snow depths can vary widely over the scope of roads. Plowing may be required on only a subset of the in-scope roads. Plowing may be requested sooner if forecasts suggest a significant snow event, due to drifting, or if ice presents a safety or travel hazard.
